Experience

Senior Full Stack Software Engineer

Remote

EAVE TECHNOLOGIES

July 2023 - January 2025

- Owned code documentation automation product, supporting writing code docs in 13 of the most popular programming languages
- Headed initial R&D for analytics product, creating proofs of concept for tracking database and networking events
- Implemented analytics tracking on date planner product to enable data-driven product decisions
- Conducted user interviews to identify product pain points, refine features, and prioritize enhancements
- Created internally-deployed admin dashboard for handling booking confirmations with Python FastAPI, GraphQL, and React.js

Software Engineer II (iOS)

Remote

HONEY (PAYPAL)

February 2021 - July 2023

- Architected and built automated translation system in JavaScript for Honey mobile apps, saving 6 hours of dev time each release
- Increased iOS app checkout flow engagement by 40% by animating checkout toast notification
- Created publishing pipelines with Jenkins and GitHub Actions to enable sharing mobile code between Honey and PayPal
- Developed product detail and checkout page UI using Swift and UIKit for the Honey iOS app
- Ported the product detail page from React Native to native Swift
- Maintained automated deployment processes, and internal Slack bots, for Honey iOS and Android apps.

Software Engineering Intern (Android)

Remote

HONEY (PAYPAL)

June-September 2020

- Fixed critical accessibility issues in the Honey Android app for screen readers, keyboard navigation, and large font sizes
- Developed automated Espresso UI tests and added to CircleCI workflow
- Built a shared UI component showcase in Kotlin, enabling greater reuse and design consistency

Head of Android Development

Grinnell, IA

GRAMMIEGRAM LLC

August 2018 - June 2019

- Led a small team in an Agile environment with a test-driven approach to build out native Android experience
- Developed REST API in Python with Django for use iOS and Android apps
- Created a proof-of-concept mobile app in Java that mirrors the messaging behavior of our web app

Senior Member, Android

Grinnell, IA

APPDEV CLUB, GRINNELL COLLEGE

January 2018 - May 2020

- Maintained the Grinnell-Directory Android app, used by staff and students of Grinnell College
- Wrote tests using JUnit, Mockito and Espresso in Java

Projects

partyq Android App

Fall 2020

(SIDE PROJECT)

- Distributed music queue mobile app that connects guests via bluetooth/wifi and plays music through the Spotify dev SDK
- Developed in Kotlin using MVVM design pattern and released as open source
- Used GitHub Actions and Fastlane tools to automate releases to the Play Store
- See project at <https://github.com/niehusst/partyq>

Education

Grinnell College, Bachelor's Degree

Grinnell, IA

COMPUTER SCIENCE MAJOR

2016-2020

- Major GPA: 3.76 Overall GPA: 3.6

Skills

Programming Languages Python, Swift, Kotlin, Typescript, JavaScript, Java, C

Mobile Android Native, iOS Native
